

# Contents

1. Introduction
2. Equations of motion for disperse multiphase flow  
(Lagrangian approach, PSI-cell model)
3. The fluid-particle phase interaction  
(turbulence model, momentum transfer)
4. 3-dimensional particle-wall interaction
5. Application of the numerical approach :
  - Prediction of particle precipitation in a series of geometrically similar cyclones
  - Comparison of numerical results with experimental data
6. Conclusions

## Lagrangian prediction of disperse gas-particle flow in cyclone separators

Th. Frank, E. Wassen, Q. Yu, Chemnitz University of Technology, Germany
